

Access Control | Flexi Keypad

The Associated Flexi Keypad is the latest in our extensive Access Control range, designed with a security privacy filter to prevent those around you from viewing the access code when inputted. The Flexi Keypad can be used as a standard keypad solution, with the ability to customise the display to suit your individual access needs - it's never been easier to ensure restricted access can be controlled. With an array of operational features, including its use as a Fingerprint Recognition Reader and an RFID Proximity Reader, the Flexi keypad can be used across multiple applications to control authorised access to restricted areas.

The privacy filter is not, however, the only access prevention technique – the Flexi Keypad has a feature built in to scramble up the numbers so movements when entering the code cannot be replicated if overseen, and any fingerprints left on the screen after access cannot give the code away either.

Features include:

- Full colour 5" display
- Security Privacy filter
- Capacitive touch sense
- Simple intuitive interface
- Optional Alphanumeric Access Code feature
- Integrated RFID feature
- Brightness & volume control
- Call button for visitors
- Crystal 4-wire connection
- Limited lifetime warranty
