Cash Management | BTU & Vision Panels

Our high-security Bulk Transfer Units can be installed through counters and external and internal walls, at any convenient height for the secure transfer of valued goods.

Designed with an electronic interlock which makes it impossible to open both doors at the same time, creating an easily controlled security air lock and ensuring the transfer of bulk cash and valued goods is secure. Perfect for medium – high security risks where space will not allow for a traditional airlock – add into the text somewhere.

For a complete solution, we also offer vision panels that work perfectly in conjunction with our bulk transfer units, allowing secure identification, communication and transfer of goods, ensuring staff and customer protection at all times. Our transfer solutions come with ballistic attack resistance in accordance with G1 and G2, and BSEN 1522: 1999.

Electronic Bulk Transfer Unit

- Approved for newer, larger CITboxes
- Recommended for medium – high risk environments
- Optional slide out shelf available

Vision Panels

- Secure vision through walls and doors
- Audio options available
- Bullet resistant to G2/S86
- Extensively tried and tested
