Cash Management | Rotary Cash Transfer Unit

The Rotary Cash Transfer Unit is a compact system designed for the movement of bulk cash or valuables between secure and non-secure areas within buildings. With a simple single level operation and a convenient load height, it is extremely user friendly for individuals in both the secure and non-secure areas.

- Single level operation with park lock
- Electronic speech transfer
- Constant ballistic overlap
- Fits standard internal walls

The Rotary Cash Transfer Unit provides a high level of communication, with its identification window and an electronic speech transfer unit, which includes a call button, operators mute button, and DDS approved induction loop.

The hatch is opened and closed by a controller in the secure area via a single level. During this process, a constant ballistic overlap ensures the secure side is protected at all times. We can also offer a Rotary Cash Transfer Unit solution for external use, constructed from weatherproof materials.
