

## Cash Management | Till Units

Our Till Drawer units are constructed from metal and are fitted with between 2 and 4 lockable drawers with inserts and 1 lockable bottom cupboard.

The lockable bottom cupboard can be altered to match our clients individual business security requirements, such as fitting a lockable metal coffer inside or drilling holes into the side to allow for electric cables.

- Constructed from metal
- 2-4 lockable drawers
- Drawers fitted with inserts
- 1 lockable bottom cupboard

With the option for both lockable and time delay cupboards, our range of Till Units ensure that unauthorised access to business assets can be prevented and restricted only to those with the proper authority. The time delay feature will provide assurance that access can only be granted when absolutely necessary, and will help to minimise the risks of attempted forced access.
