Secure Storage | Traka 21 Key Cabinet

The Traka21 Key Cabinet allows for businesses to trace and account for every key or keyset, which are individually locked in place, to ensure that unauthorised access cannot be gained, securing the premises from potential threat.

- Stand-alone Plug & Play solution with advanced RFID technology
- Screen based audit trail and reporting capability or export via USB port
- 21 robust long-life iFobs with security seals
- 21 locking receptors with LEDs
- Manual override and door release functions in case of emergency

Traka21 Key Cabinet Solution works by authorising, securing and monitoring all of your keys, automatically controlling and recording when a key is used and by whom. By allowing tracking of use, this helps to provide peace of mind that should unauthorised access be gained, or items were to be misplaced or go missing, the tracking system will be able to clearly show who last accessed the area.

The Traka21 iFob attaches to the keys or keysets using a robust security seal, which can then be locked in place within the cabinet, having been assigned to a specific receptor within this, and can only be released by an authorised user.
